

Provisio Insights Named an OpenAI Select Partner to Advance Secure AI Delivery

Senior-led firm brings AI engineering, cybersecurity leadership, and global security advisory experience to the work of putting AI into operation.

AUSTIN, Texas, September 29, 2026 - Provisio Insights, a senior-led cybersecurity, AI, and engineering firm, today announced that it has been named an OpenAI Select Partner in the OpenAI Partner Network. As a Select Partner, Provisio will continue its work helping organizations turn promising AI use cases into secure, accountable systems that can operate in real business environments.

The OpenAI Partner Network is a global program for partners to build, sell, and deliver AI solutions with OpenAI. It brings together industry expertise, delivery capabilities, and customer relationships to help organizations turn AI ambition into measurable impact.

As an OpenAI Select Partner, Provisio Insights will continue working with OpenAI to help organizations build, deploy, and scale AI solutions responsibly and effectively. Provisio brings together AI implementation, cybersecurity leadership, and global security advisory experience. Its teams connect the workflow, data, models, integrations, access controls, evaluation, human review, and operating ownership needed to move an AI initiative into service.

"The standard for enterprise AI is whether it holds up inside the real organization: its systems, security obligations, and people," said John Schieferle Uhlenbrock, Managing Principal and CISO of Provisio Insights. "We bring security judgment and hands-on engineering to that challenge, with clear authority and evidence for the decisions that follow launch."

Provisio Insights supports organizations with AI use case selection, application and agent development, integration, evaluation, security, and managed operations. Its advisory work also helps leaders address governance, resilience, and risk across U.S. and mission-aligned global contexts. That combination gives clients a clearer basis for deciding when to advance, revise, contain, or stop an AI initiative.

Provisio Insights plans to expand its AI delivery work, focusing on capabilities that clients can evaluate, own, and operate with confidence.
